

Application Security Training. Redefined.

Keep your organization safe with interactive secure code training for developers

Meet the Industry's Most Intuitive, Innovative, and Engaging AppSec Training

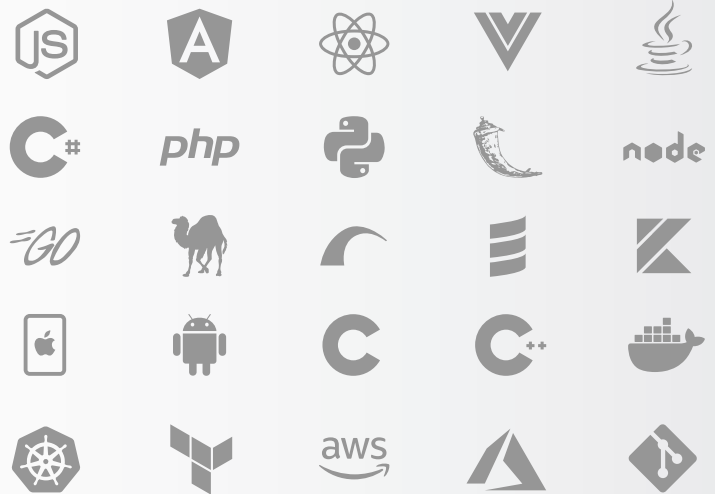

With Kontra's AppSec Training by ThriveDX we are revolutionizing secure code training. Based on real-world interactive scenarios, developers will understand the mindset of a hacker, identify vulnerabilities in their code, and mitigate and prevent future attacks.

LEARN

Real-World Security Incidents

We teach developers to think like a hacker by analyzing attack surfaces in applications, recreating their steps, and both identifying and applying secure code fixes to solve vulnerabilities.

They benefit from continuous industry driven content updates, inspired directly by real-world vulnerabilities, bug bounty write-ups, and scenarios contributed by partners.

EXPERIENCE

Training Made for Developers by Developers

Our experience shows that developers are more engaged in training when the content has a basis in reality, rather than generic and gamified examples.

We provide short training sessions of interactive storytelling, placing developers in the middle of the action. These experiences give them skills that can be then immediately used in their daily projects.

Our visually stunning platform was meticulously designed to guarantee the ultimate learning experience for developers.

DEPLOY

Our Content, Your Environment

Our SCORM-compliant content works with leading third-party learning management systems to enable faster integration and deployment in a platform developers already know and use.

In addition, thanks to our strategic partnerships & integrations, you can also consume selected content in the developer tools you love.
