

Build your own geo-distributed cloud storage and **3X your margins**

DS3 Composer is a ready-to-use SaaS Software that enables MSPs and VARs to effortlessly establish themselves as cloud object storage providers in minutes.

Transform your business in 15 minutes

Step 1

Recycle your infrastructure or access existing resources from bare-metal / public-cloud.

Step 2

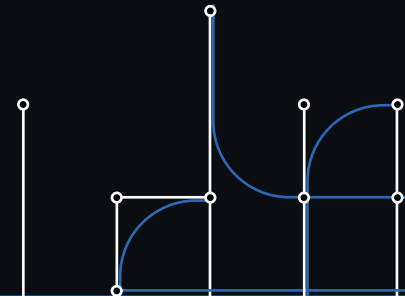

Aggregate them into storage regions, in a few clicks.

Step 3

You've created your white-labelled object storage! Name it using your company's name.

You've just built your digital independence and a new business line: no 3rd party relations and cyber-threats anymore, just your white-labelled object storage.

Enjoy direct customer relationships and get all the margins — with no upfront investment.

Why choose DS3 Composer?

Fully customisable

From edge to cloud, DS3 Composer nodes can run on any hardware/VM.

Enjoy your white-labelled object storage, where each tenant has full control over resources, configurations, billing, reports, etc.

Direct customer relationships

Keep your customer relationships strong and direct, avoiding the risk of them moving away to a large cloud provider, thereby securing recurring revenue and loyalty.

Secure & compliant storage regions

Build dedicated, certified storage regions (swarms) for specific industries like Public Sector, Healthcare, and Surveillance, meeting stringent compliance and security requirements.

3x your cloud margins

Ensure competitive pricing and increase your profitability.

Unlike the main OS vendors, we take care of all the backend — no complexities, no infrastructure investments required.
